

Recommendations for Single Pipe unloading out of a Container

Recommendations for lifting long HDPE pipes by forklift

- Use HDPE coated steelpipe, like used for gas applications, with inner diameter fitting over forklift fork.
- If uncoated steelpipe is used, avoid sharp edges on the front end.
- Use plastic cap at front end if possible, to avoid damage on the inside of the HDPE pipe.
- Length of the steelpipe should be 7 m (23 ft.) minimum, as longer the steelpipe as better the handling of the HDPE pipe.
